

THE UNIVERS OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME;

Pioneer Hi-Bred International, Inc.

THE CLUS, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED DISTINCT VARIETY OF SEXUALLY REPRODUCED, OR TUBER PROPAGATED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF TWENTY EARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC UNISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE TO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, OR NIGHT, OR EXPORTING IT, OR CONDITIONING IT FOR PROPAGATION, OR STOCKING IT FOR ANY OF THE POSE. OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT PROTECTION ACT. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

SOYBEAN

'93B65'

In Testimony Mexcest, I have hereunto set my hand and caused the seal of the Flunt United Protection Office to be affixed at the City of Washington, D.C. this twenty-fourth day of April, in the year of our Lord two thousand one.

í

Exhibit A. Origin and Breeding History of the Variety

Soybean Variety 93B65

Variety 93B65 evolved from a 1991 cross of 9362*9381.

It is an F5-derived variety, which was advanced to the F5 generation by modified single seed descent. The F6 progeny row of 93B65 was grown in the summer of 1994. Subsequently, 93B65 has undergone three years of extensive testing and purification and has been observed by the breeder to be uniform and stable for all plant traits from generation to generation, with no evidence of variants. On the basis of soybean cyst nematode resistance, yield potential, standability, and phytophthora resistance, variety 93B65 was assigned a commercial number.

The purification block was grown during the summer of 1996 and 11 sublines were bulked for increase. Fourteen acres of 93B65 (breeders' seed) were grown in the summer of 1997. 242 acres of parent seed stock (foundation seed equivalent) were grown in the summer of 1998 and 11,152 bushels harvested.

Exhibit B. Statement of Distinctness

Soybean Variety 93B65

Variety 93B65 is most similar to 9362 and 9381.

Both 93B65 and 9362 have white flowers, are resistant to soybean cyst nematode race 3, and are resistant to race 1 of *Phytophthora megasperma* var. sojae. However, 9362 has grey pubescence and buff hila whereas 93B65 has tawny pubescence and a black hila.

Both 93B65 and 9381 have white flowers, tawny pubescence and black hila. However, 9381 is susceptible to soybean cyst nematodes (race 3) and is also susceptible to race 1 of *Phytophthora megasperma* var. sojae whereas 93B65 is resistant to both challenges.

Exhibit D. Additional Description of the Variety

Soybean Variety 93B65

In Exhibit C we have identified variety 93B65 as susceptible to bacterial blight, brown spot, pod and stem blight, rhizoctonia root rot, bud blight, yellow mosaic, cowpea mosaic, pod mottle and seed mottle.

This does not mean that variety 93B65 is any worse for these problems than other varieties of similar maturity. Rather, we do not consider 93B65 to be immune to these problems. Therefore, we have chosen to be conservative and have identified the line as "susceptible".

If the maturity groups were divided into tenths, the relative maturity for 93B65 would be 3.6.
